

Why we don't *analyse* with network visualisations

- Many layouts are unstable or non-deterministic
- Network visualisation tools don't focus on analytics
- Overplotting
- Fragmentation of approaches

ggraph

- Adaption of ggplot2 for relational data
- A unified API for “all” network visualisation approaches
(and all network data classes)
- Focus on static plots
 - Plotly integration hopefully on its way
- Available on CRAN
 - `install.packages('ggraph')`
- Development on GitHub
 - `devtools::install_github('thomasp85/ggraph')`
