# The ggraph trinity

```
ggraph(data, layout = 'kk') +
  geom_edge_link() +
  geom_node_point() +
  theme_graph()
```

Layouts

- Convert a network structure into a spatial arrangement of the nodes

- Add additional information to the nodes

- Unify the data source

  - igraph

  - network

  - dendrogram/hclust

  - tidygraph will handle this in the future
